Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11,13-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over the British patent (British). This patent discloses the basic apparatus including a tool holder, a retainer, and a cutting bit. The retainer 11 has an inclined surface that is not tapered. However, tapering surfaces to ensure proper fit is well known in the mechanical arts and of no patentable merit. Therefore, in order to ensure a proper fit, it would have been obvious for one of ordinary skill in the art to modify British by tapering the inclined retainer surface, since such is well known by one skilled in the art. The remaining limitations would then have obvious modifications by one skilled in the art as they solve no stated problems. For example, the exact angle of inclination would depend on several factors such as the size of the bit and the desired force fit.

Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over British as applied to claim 1 above, and further in view of Gorman. British does not use a bit with a carbide tip which may result in excessive wear. Gorman solves this problem by disclosing similar apparatus including the use of a carbide tip. In order to prevent premature wear, it would have been obvious for one of ordinary skill in the art to modify British by providing a carbide tip, taught to be desirable by Gorman.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
